

## New Features in the WhatsUp Gold v14.2 Release

From the core foundation to the plug-ins, WhatsUp Gold v14.2 has many great new capabilities, including automatic failover, virtual infrastructure management, business hour reporting, SMS alerting, flow monitoring support for firewalls, policy based configuration management, scheduled Layer 2 discovery, and much more.

WhatsUp Gold v14.2 is all about IT Management Made Simple...delivering a more feature rich, easy to use and intuitive application that makes your life a little bit easier.

### Core WhatsUp Gold v 14.2

New Features in this Release	How They Make IT Management Simple
Business Hour reporting	Align your reporting to match your business schedule
Scheduled PDF reporting	Easy to schedule and share workspace and full reports with your management and business counterparts
Summary blackout reports	Know everything that happened during the blackout period in a simple summary report
Alert Center - SMS alerts	Receive SMS alert messages right on your phone
Multiple data points on a single graph	Consolidated views of multi-component devices like, say, a multi-core CPU on a single graph
Linux/Unix systems monitoring via SSH	True agentless monitoring for Unix and Linux systems to add to our powerful Windows systems monitoring capabilities

### WhatsUp Gold Failover Manager

New Features in this Release	How They Make IT Management Simple
Intelligent and automated failover	Assures the reliable operation of your WhatsUp Gold platform with redundant Primary and Secondary servers
Multiple configurations for failover and failback	Choose the kind of failover and failback conditions you need to meet the task at hand
Consolidated alerting on failover in Alert Center	Lets you know when failover is initiated whether manually or automatically

## Flow Monitor

New Features in this Release	How They Make IT Management Simple
IPFIX, sFlow v2 and Cisco ASA Firewall Support	Added to <a href="#">NetFlow</a> , <a href="#">J-Flow</a> , <a href="#">sFlow</a> and <a href="#">Flow Publisher</a> traffic probe support – this is a one-stop-shop for application flow and bandwidth analysis
95 percentile reporting	Easy to compare and verify your bandwidth usage against the billing from your service provider

## WhatsConfigured

New Features in this Release	How They Make IT Management Simple
Policy-based monitoring	Automatically ensure that all existing configurations and changes are consistent with internal policies
Global configuration file search	Find configuration files that you need quickly and easily
Custom script export/import	Easily share custom scripts across your company and in the community

## WhatsConnected

New Features in this Release	How They Make IT Management Simple
Scheduled Layer 2 discovery	The automated way to know everything on your network and how they are connected
Auto device dependencies	More automation that easily creates device dependencies when you import into WhatsUp Gold
New asset / inventory, connectivity and port utilization reporting	More in-depth information – in consolidated and easily filtered reports

## WhatsUp Gold WhatsVirtual

New Features in this Release	How They Make IT Management Simple
Native support for VMware API	Single console management of physical and VMWare ESX/ESXi virtual servers in one single console
New workspace reports and drilldowns	Easily understand host and virtual machine relationships and their performance
Support for powerful VMware Actions	Extends monitoring capability to managing virtual machines through start, stop, suspend, snapshot, and reset actions.
