

WhatsVirtual v1.0 System Requirements

The WhatsVirtual v1.0 plug-in requires the following hardware and software components for its installation:

Standalone Installation

Hardware Requirements:

- Dual-core 2GHz or faster
- 2 GB RAM
- 8 GB Disk space

Operating System Requirements:

- Windows XP Professional SP2
- Windows Server 2003 Standard SP2 for 32 and 64-bit editions
- Windows Vista Ultimate for 32 and 64-bit editions
- Windows Vista Business for 32 and 64-bit editions
- Windows 7 for 32 and 64-bit editions
- Windows Server 2008 for 32 and 64-bit editions
- Windows Server 7 for 32 and 64-bit editions

Database

- Local: Microsoft SQL Server Express 2005
- Local or Remote: Microsoft SQL Server 2005
- Local or Remote: Microsoft SQL Server 2008

Microsoft Runtime Environment and Libraries

- .NET 3.5 Framework SP1
- Microsoft Windows Scripting Host v5.7

Supported Virtual Environments

- ESX 3.0.x, 3.5, and 4.0 versions
- ESXi 3.5 and 4.0 versions

Note: WhatsVirtual does not yet support VMware vSphere or Virtual Motion (which is used for live migration of VM's within a Host or among different Hosts) products. This is expected in future versions.
