

WhatsUp Gold Failover Manager v1.0 Benefits Overview

The **key benefits** of the WhatsUp Gold Failover Manager plug-in include:

- Assurance of high availability and resilient infrastructure monitoring
 - Automatic failover capability ensures that a secondary system is always ready to take over if the Primary WhatsUp Gold system is impaired
- Minimized risk of “dark periods” when there is complete lack of visibility due to failure of the monitoring system
 - Protects business operations at all times by maintaining infrastructure visibility even when the primary monitoring system is down
 - Maintains integrity of SLA (Service Level Agreement) reporting through continuous visibility of monitored infrastructure and services
- Lower risk of monitoring data loss
 - Continuous monitoring data may be useful for historical analysis or in cases, be mandated by regulatory requirements
- Efficient and highly productive operation
 - Automation and intelligence ensures that failover can be executed without human intervention
- Flexible coverage across all WhatsUp Gold component services
 - Failover can protect against impairment to the whole WhatsUp Gold system or specific components like data collection, alerting, discovery or individual plug-in services
